

Will iClone 6 release Mac version?

Currently iClone 6 is only supports Windows Operating System and does not support virtual machine software such as "Parallels Desktop" or "VMWare Fusion".

Support for Apple Macintosh Operating system is still in the evaluation stage, and we will be announcing further developments as they come.

Like previous version, you may choose to run iClone 6 on a separate Windows Operating System (next to your Apple Mac OS) by using "BootCamp" from Apple.
