There is a bug in Dell's Backup and Recovery software that is causing any 64-bit application which uses the Qt5 core DLLs to crash. The below are the 2 methods to fix.

1st Method: -

Apply Fixed Patch

1) Make sure Dell's Backup and Recovery software is installed.

2) Confirm the installed path was under C:\Program Files (x86)\Dell Backup and Recovery\

3) Copy the Fixed Patch zip file from https://ftp.reallusion.com/reallusionsupport/Fix_for_DELL.zip to local drive and un-compress it.

4) Double click to run "UnregisterDellShellExtension.bat".

Note: If to restore from the Fixed Patch, just double click to run "Restore.bat" .

2nd Method: -

May uninstall the **AlienRespawn** or **Dell Backup and Recovery** application that is responsible for the crash.

This utility software is pre-installed on new Dell and Alienware computers and is incompaiible with iClone 6.
