How does one distinquish between pre-7.1 Linear Data and the new Curve Data?

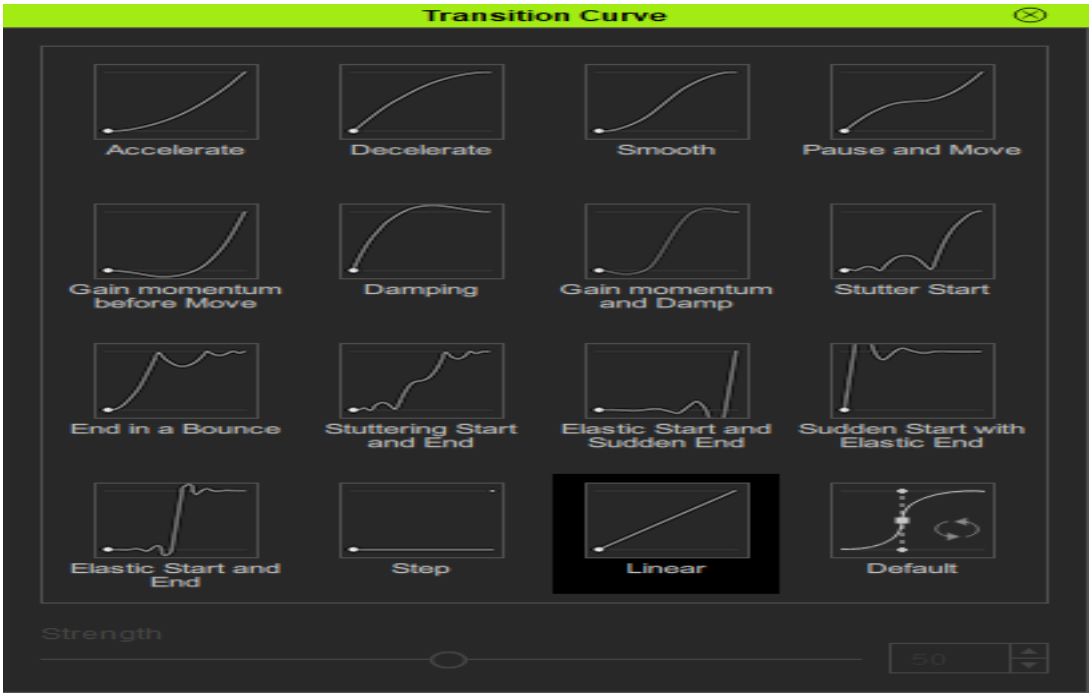

1. Only Curve Data can show up in the Curve Editor.

2. Color differences between old Linear Clip and new Curve Clip :

3. New Curve Key supports default key tangent types under the Preference menu.

4. New Curve Data provides 16 types of Transition Curve Presets (accessible from the context-menu).

5. Old Linear Data can be converted to the new Curve Data by using the Convert to Curve Data function accessible in the following ways:

a) Right click on the key or clip and perform Curve Editor > Convert to Curve Data.

b) Right click on the character or object in the viewport and perform Curve Editor > Convert to Curve Data.

c) Perform Menu > Plugins > Curve Editor > Convert to Curve Data.
