We currently have no plans to update the Leap profile for the new Ultraleap controllers.

Please note that the Leap Motion profile is only supported with the Leap Motion Controller using the Orion 4.0 or 4.1 SDK versions. (Gemini 5.0 or later is not supported.)

Since Ultraleap has updated their software and it is currently not compatible with the Motion LIVE 3D & 2D Plugins, we kindly ask you to refer to the following link to download and install the previous SDK version:

https://ftp.reallusion.com/reallusionsupport/ultraleap-hand-tracking_v410.zip
