

Are iClone 8 and Character Creator 4 support RTX render?

iC8 and CC4 can connect to NVIDIA Omniverse - a RTX GPU based path-trace render engine, which supports USD (Universal Scene Description) data architecture for collaborative design projects. With it, users will be able to generate commercial-quality visuals directly from iC8 and CC4.

Those who have purchased iC8 and CC4 will have free access to Omniverse Connector, and a preliminary version will be provided for early experience.
