

**Q: How can I get my Reallusion Hub to initialize?**

**A:** For Nvidia GPUs, try to restore back to an older GPU driver and see whether this helps.

To help, search for your GPU card in the link below, and install an older driver from the list.

We recommend v516.40, v512.96, or older drivers.

Make sure you choose the custom install, and then check the box for a clean install, on the page of the installer.
