

What is the iClone Motion Director?

Accomplishing simple human movement normally requires many steps, and iClone's Motion Director is an intuitive way of using game-like controls, making motions interactive, highly natural, and expandable with behaviors and triggers.

With the Motion Director (MD) system, animators don't need to know how to align motions, smoothly blend them together, or make proper directional controls.

The MD features in the iClone 8 includes game piloting, mouse waypoints, zone animation, along with perform triggers, and random idle behaviors.
