What should I do if Auto Setup or other bridging tools stop working after I change my Reallusion software version?

If Auto Setup or other bridging tools become incompatible after a version change, try either of the following steps to restore compatibility:

1. Install the latest version of the Auto Setup or bridging tool for your target application.

2. Use Reallusion Hub to locate your software's product card and click "Product Home". This will take you to the official plugin page, where you can download the version compatible with your current setup.

3. If issues persist, contact Reallusion Customer Support for further assistance.

Affected tools include:

- ZBrush Pose Tools
- Blender Auto Setup
- Maya Auto Setup
- Unreal Auto Setup
- Unity Auto Setup
- 3ds Max Auto Setup
- MetaHuman Live Link
- Omniverse Connector
