

What if the motion generation task fails? Will I lose the DA points I spent?

A motion generation task may fail for several reasons, such as:

The video does not meet generation requirements (e.g., no person detected, or the performer is only partially in frame).

The network connection was interrupted during processing.

The system timed out due to long queue times or concurrent user limits.

Task Status and DA Point Handling

Failed tasks can appear under two possible statuses: **Charged** or **Uncharged/Refunded**.

Video	Status	Edit
 male-person-walking-...	● Error 	

Error state:

You can fix the issue and click **Retry** to resubmit the task. In this state, you will **not be charged again**.

Video	Status	Edit
 squat-lovely-young-wo...	● Trimmed 	
 worker-installs-ventil...	● Unprocessed 	

Trimmed / Unprocessed states:

No charges are applied for tasks that fail and revert to their original state. You may resubmit these tasks for proper billing once the issue is resolved.
